PROFESSIONAL SUMMARY

MCA student building Django/PostgreSQL backends with a focus on transactional integrity, role-based access control and optimization algorithms. Currently building a six-role distribution and warehouse management system with a Flutter mobile client. Seeking an entry-level Python/Django backend development role.

TECHNICAL SKILLS

Primary: Python, Django, SQL, PostgreSQL, MySQL, SQLite, REST APIs, JWT auth, Flutter (Dart), Git, GitHub
Working knowledge: Java, JavaScript, PHP, C, HTML5, Bootstrap, MongoDB, MERN stack
IoT & Hardware: ESP32, PIR, DHT11 and LDR sensors, OLED display, servo actuators
Tools: VS Code, Android Studio

PROJECTS

Distribution & Warehouse Management System (DiSMS) — In Progress

Django, PostgreSQL, Django REST, JWT, Flutter

- Building a system for a regional consumer-goods distributor with **4 core modules** (order management from sales rep to delivery, returns, put-away, billing and ledger) and **6 role-based user types**.
- Implemented warehouse pick-route optimization using nearest-neighbour construction refined with 2-opt; designing ABC/XYZ rack-slotting, to be benchmarked against a baseline layout.
- Exposed a JWT-secured REST API (token refresh, products, orders, pick-path and scan endpoints) consumed by a Flutter app: order creation with live stock warnings for field staff, and a guided pick path with barcode verification for warehouse staff.
- Mobile client passes Flutter static analysis with zero issues and 5 automated tests.

EV Charging Station Locator & Slot Booking Platform

Python, Django, SQLite, Bootstrap

- Built a full-stack application that locates registered EV charging, parking and service stations using proximity-based filtering.
- Designed a three-tier RBAC architecture isolating workflows for System Admins, Station Managers and End Users.
- Implemented slot booking inside Django database transactions to prevent duplicate bookings for the same time slot.

Multi-Category E-Commerce Platform

PHP, MySQL, HTML5, JavaScript, Bootstrap

- Built a server-rendered store with two-tier authentication (Admin: inventory and users; User: profile, wishlist, order tracking).
- Designed a normalized relational schema for multi-category filtering, cart management and a simulated multi-step checkout.

IoT-Based Smart Classroom & Energy Management System — Team project

ESP32, PIR, DHT11, LDR, OLED, servo | Team led by Ashil | ***My role: hardware***

- Handled the hardware side of an ESP32 scale-model classroom: wiring and interfacing PIR occupancy, DHT11 temperature/humidity and LDR light sensors, the OLED status display, and a servo-driven curtain actuator.
- System automates lights and fans from occupancy and ambient light, and serves live sensor data through a locally hosted web server and the on-site OLED terminal. Team repo: github.com/a5hil/NBA_SCR_App

EDUCATION

MCA, Federal Institute of Science and Technology (FISAT), Angamaly — 2025 – 2027
Currently in 3rd Semester

BCA, St. Kuriakose College, Kuruppampady — 2022 – 2025
CGPA: 7.0

Class XII (CBSE), Amrita Vidyalayam, Perumbavoor: 80.8% — 2022

CERTIFICATIONS

Cloud Computing, NPTEL (IIT Kharagpur) — 2026
Java Programming, National Skill Development Corporation (NSDC) — 2026
Web Development, National Skill Development Corporation (NSDC) — 2025

DECLARATION

I hereby declare that all the information shared above is true to the best of my knowledge and belief. I take full responsibility for the accuracy of the details mentioned in this resume.
